 250 Watt Cobra \$9.38
 250 Watt Directional Flood \$10.72
 400 Watt Directional Flood \$14.74
 Each additional pole/span \$1.82

PCA FORMULA The Power Cost Adjustment (PCA) is expressed as dollars per kWh and is multiplied by the energy (kWh) sold during each billing period to each customer. The PCA is designed to be calculated monthly based on actual power costs and energy sales for the month. The following formula has been designed to calculate the PCA:

$$PCA = A / B - \text{Base Rate} \quad \text{where,}$$

PCA = The cost adjustment expressed as dollars per kWh to be multiplied by the energy (kWh) sold during each billing period to customers on rates subject to the PCA.

A = Actual wholesale power cost for the most recent month (includes all wholesale power costs as billed by the Kentucky Municipal Energy Agency).

B = Actual energy sales from rates subject to the PCA for the same month as “A” above.

Base Rate The Base Rate is the base wholesale power cost expressed as dollars per kWh, included in the base rates for all retail customers.

Each month, the PCA formula is used to calculate average monthly purchased power costs per retail kWh sold and to determine the adjustment to customer bills needed. If purchased power costs are lower than estimated, the PCA is negative and customers receive a credit on their bill. If purchased power costs are higher than estimated, the PCA is positive and customers receive an additional charge on their bill.
